SUMMARY

I am a Certified Data Engineer with a robust experience in designing

and maintaining scalable data pipelines. My expertise lies in using technologies like PySpark, SQL, Databricks, and AWS. I excel at building cloud-native platforms and optimizing workflows, and I have significant experience in Generative AI and analytics. I am committed to delivering efficient solutions that empower data-driven decision-making

EXPERIENCE

Software Engineer

Info Services

01/2024

INAAS (Insight-as-a-Service) – AI Analytics Agent

- Developed an AI-powered analytics agent that converts natural language questions into SQL queries and delivers real-time insights
- Achieved 90% query accuracy with response times under 30 seconds for standard datasets
- Designed a multi-data warehouse query engine supporting Databricks SQL and PostgreSQL
- Implemented session-aware memory using DynamoDB for multi-turn analytical conversations
- Researched and applied RAG architecture and prompt engineering techniques
- Deployed a serverless production-ready architecture using AWS AppRunner and AWS Amplify

Data Migration Engineer

Internal Project

Data Migration Engineer – Oracle to BigQuery Modernization

- Migrated enterprise data workflows from Oracle to Google BigQuery
- Supported migration of 50-60 TB of historical and incremental data
- Developed and modified workflows for loading, transforming, and validating datasets
- Utilized GCP services including BigQuery, Cloud Run, Google Cloud Storage to build scalable solutions
- Implemented optimized data ingestion and storage strategies
- Collaborated with teams to ensure schema compatibility and data validation
- Automated deployment and monitoring processes using CI/CD

SKILLS

Gmail pySpark SQL

Databricks AWS Serverless

AWS Services S3 EMR

AWS Lambda DynamoDb

AWS Redshift CloudWatch GCP

IAM Google BigQuery

GitHub Actions Python Pandas

PostgreSQL AWS Amplify

AWS S3 ETL CSV

Microsoft Power BI YAML

PROJECTS

Synthetic Data Generator

Open Source Project

- Built a zero-cost LLM-powered CLI tool to generate realistic synthetic CSV data
- Generated 10K records/minute using open-source LLM APIs
- Implemented a pluggable adapter pattern for token-safe prompt generation
- Used in personal projects to generate mock datasets for testing data pipelines

EXPERIENCE

Data Engineer

Harrys Inc

Manufacturing Analytics

- Built an end-to-end data pipeline to centralize and analyze razor manufacturing data
- Engineered a medallion architecture using Delta Lake
- Constructed 15 data assets in Redshift, powering multiple Power BI dashboards
- Implemented data validation rules to filter junk records and handle schema drift
- Optimized processing by splitting monolithic tables and improving join performance
- Reduced infrastructure costs using Delta Lake and EMR Serverless

EDUCATION

B.Tech

Kalasalingam Academy of Research and Education
