Summary

Certified GCP Data Engineer with proven expertise in building scalable data platforms and Generative AI-powered applications. Skilled in designing event-driven pipelines with Docker and infrastructure-as-code (Terraform), integrating batch and streaming workloads across GCP and AWS. Experienced in developing LLM-driven backends that translate natural language into SQL, generate interactive dashboards, and deliver AI-powered insights. Hands-on with big data frameworks (Spark, Databricks, PySpark) and modern backend technologies (FastAPI, Next.js, Chart.js) to deliver end-to-end AI and analytics solutions.

Professional Experience

• Data Engineer

March 2023 – Present

Info Services

Hyderabad, IN

Ford Motors - Authoring Analytics

- Built a Dockerized ETL pipeline with Terraform-based deployments, automating Drupal data extraction and loading into BigQuery via Google Cloud Storage.
- Designed incremental and full extractions from Drupal, storing data in Google Cloud Storage, and using Pub/Sub to trigger downstream processing.
- Implemented comprehensive auditing (timestamped logging and record counts) to ensure traceability and maintain data quality.
- Orchestrated the entire ETL workflow using GitHub Actions, automating pipeline deployment and ensuring seamless updates and monitoring.

Ford Motors - Search Analytics

- Containerized an event-driven ETL pipeline with Docker and deployed on Cloud Run, ingesting meta-data from GCS into BigQuery using Pub/Sub.
- Built a data validation and ingestion framework, verifying JSON structure, ensuring checksum integrity, and mapping fields to the BigQuery staging table.
- Automated stored procedure execution to transform delta data from staging tables, ensuring seamless updates to HUB and BI tables while maintaining metadata index consistency.
- Implemented robust error handling, routing failed records to a rejection bucket for monitoring and troubleshooting.
- Integrated GitHub Actions for CI/CD automation, enabling seamless testing and deployment of ETL scripts and infrastructure changes.

Info Services – Insight-as-a-Service (Generative AI Analytics Agent)

- Architected a FastAPI backend integrated with AWS Bedrock LLMs to translate natural language into optimized Databricks SQL queries.
- Designed a modular LLM-driven pipeline for prompt construction, validation, and rewriting, significantly improving SQL correctness and reducing hallucinations.
- Implemented a query execution framework that serializes results into structured JSON, enabling seamless data interchange with frontend clients.

- Integrated backend services with a Next.js + Chart.js frontend, powering automated dashboard generation and real-time interactive visualizations.
- Extended the system to produce AI-generated analytical insights from visualization outputs, bridging the gap between raw query results and actionable intelligence.

Skills

- **Cloud Platforms:** GCP (BigQuery, Cloud Storage, Dataflow, Dataproc, Pub/Sub, Cloud Functions, Cloud Run), AWS (S3, Lambda, EMR, Redshift, Athena, Glue, EventBridge)
- **Big Data & Processing:** Apache Spark, Apache Beam, Databricks, PySpark, ETL/ELT
- **Data Orchestration:** Apache Airflow, Cloud Scheduler (GCP), EventBridge Scheduler (AWS), GitHub Actions
- **AI / ML & GenAI:** AWS Bedrock (boto3, amazon.nova-lite-v1:0), Generative AI (LLM integration), Prompt Engineering, Databricks SQL (natural language → SQL), FastAPI (AI APIs), Pydantic / pydantic-settings, python-dotenv
- **Programming & Query Languages:** Python, SQL
- **DevOps & Deployment:** Docker, Terraform, GitHub Actions, Cloud Run (containerized deployments)

Certifications

- Google Cloud Certified Associate Cloud Engineer
- Google Cloud Certified Associate Data Practitioner
- Google Cloud Certified Professional Data Engineer

Education

- **Visvesvaraya Technological University**
Bachelor of Engineering: Civil Engineering

2019
